PERSONAL PROJECTS

Project Fusion - Insurance Domain (06/2017 - Present)

- Development for external US-based insurance client. Migration project from Mainframe System to UI Based CRM System for credit card insurance, follow agile software development with Azure DevOps.
- Worked on various modules like **Data Conversion**, created custom SQL scripts to convert mainframe-based (CSV) data to relational SQL tables with business logic.
- **Policy Manual Enrollment**, worked on UI (Html, CSS, Javascript, and JQuery), web services/web API's to validate business rules via Corticon for adding new policy and coverages.
- **Policy Auto Enrollment**, worked on SSIS packages to import policies by client's input files.
- **Member Search**, created views & UI to search the enrolled policy member.
- **Claims**, worked on UI, web service/web API's, stored procedures to validate business rules and create new claim.
- **Payable**, after claim approved by an authorized person, create a new payable record to manage and maintain accounting data. Worked on UI, Javascript, and workflows.
- **Interface**, worked on SSIS, SSRS and stored procedures to create financial reports and processing.
